# Riverlife Church Perfects Sanctuary Sound with NEXO GEO M10

Riverlife Church in Singapore has grown from its seed congregation of less than 200 in 1991 to the 3,000+ gatherings of today. However, it is the presence of audio consultant and local resident, the Grammy-nominated recording engineer and percussionist Jerry Chua, that has inspired Riverlife to take the production technology in its Sanctuary to the very highest level.

Following the installation of a Yamaha PM10 digital console, Riverlife has now added NEXO's new GEO M10 mid-size line array, giving Mr Chua his dream FOH system with a stereo mix to replace the distributed system that was there before.

Jerry Chua is instrumental in the choice and implementation of the A-V systems at the church, where live music plays a central role. After attending an outdoor

concert at Republic Polytechnic, where the GEO M10 made its first Asian debut, he asked Yamaha Music Singapore to set up a demo at Riverlife.

"Nothing came close to the GEO M10 in terms of power, coverage and indeed price: performance. The M10s are punchy, yet provide this altogether sweeter tone," was Mr Chua's appraisal after hearing demonstrations by NEXO and several other manufacturers.

Jerry Chua (in green shirt) with his team at Riverlife Church

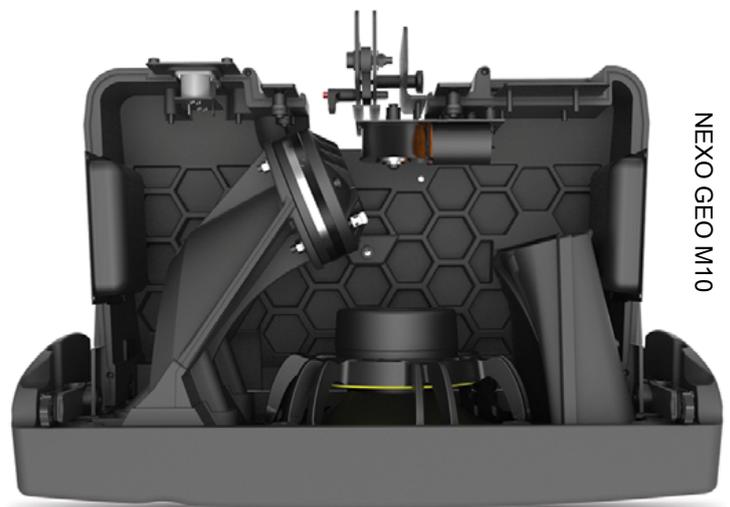

Selection of the M10 was unanimous, and local systems integrators A-Tech installed the system according to simulations made with NEXO's NS-1 modelling software.

The L-R hangs each carry 8x M10 modules, the last of which is a downfill version to provide coverage for the seats closest to the stage. Four LS18 subs are fitted in a central hang, and a pair of ID24 point-source cabinets provide front fill. The system is powered by just two amplifiers, a NEXO NXAMP4x4 and

a NXAMP4xa, which are managed over a Dante network.

The system has now been running for a couple of months, and the verdicts are in. Church leaders are happy, the congregation is full of compliments, and the musicians are delighted with the extra bass response, which has allowed them to turn down their in-ear monitors. With the quality of the NEXO line array's sonic performance, the system can be run at a lower SPL, which is good practice for a church in a residential neighbourhood.

NEXO GEO M10

India has bravely led the inaugural Women Walk Together (#WWT) movement with a momentous event staged at the Opus Performance Club in Bangalore city. Mr Santana Davis, CEO of J Davis Pro Sound and Lighting, and working in conjunction with event management company Distinct Communication, has taken a lead in supporting the noble cause in India and his team handled all technical aspects of the event, from the initial planning to running the entire show on the day itself. Attendees comprised of Bangalore's finest events and production companies, and nominated female staff.

The event, aimed at promoting awareness of jobs for women in the live production industry, was held simultaneously in India, South Africa, Brazil, Guinea and the UK on 18 July, Nelson Mandela Day. Each event worldwide was led by female production teams. India's Monisha Das from Clacutta was Sound Engineer for the event, while Mumbai's Karuna Sahu was the Stage Tech who was handling the

complete change over on stage. "As a woman in the event production industry, I can safely say that the work is really a breeze," said Event Production Manager, Shipra Venkatesh. "Shipra is a well-travelled event production manager, specialising in sound engineering and lighting design. She has engaged in live music productions across extensive regions of India, and is developing the first ever onsite training crews to support the new generation to gain experience in the production industry. She will lead the first all female technical crew that has ever operated in India as part of the #WWT global showcase," said Mr Davis.

The technical production was handled by the house system of QSC WideLine-10 linearrays, QSC K12 monitors, a DiGiCo S31 console, and a Sennheiser ew 300 G4 system with Shure UR4D receivers (provided by J Davis). To expand the house lighting rig, J Davis brought in their Elation Platinum Beam 5R movers, LED PARs and Molefay fixtures.

# Clear-Com's THINK Academy Brings Hands-On Training and Demos for All Current Products

Clear-Com® is pleased to announce the opening of its newest training room, the THINK Academy, at its manufacturing facility in Carlsbad, CA.

The new training location will expand Clear-Com's ability to provide training and sales demonstrations for partners, dealers, and end-users.

The THINK Academy is equipped with a wide range of Clear-Com products including, Eclipse HX Matrix, FreeSpeak II wireless intercom, LQ IP transport, and HelixNet digital partyline to allow flexibility in its training offerings.

"Clear-Com has always strived to provide industry leading products and support. As intercom systems evolve, we at Clear-Com recognize the need for training on new technologies and equipment," said Frank Linton, Training Program Manager.

Clear-Com provides a variety of training options. "Factory training in Carlsbad is currently available every six months, and as demand increases, we will add more dates," explained Linton. "Training is also offered in Cambridge, UK and Alameda, CA."

Scheduling of factory training is booked through [Eventbrite.com](https://www.eventbrite.com) at [www.eventbrite.com/o/clear-com-17150779913](https://www.eventbrite.com/o/clear-com-17150779913)

Training and sales demos on customer and Partner sites are also available upon requests by emailing [TechnicalTraining@clearcom.com](mailto:TechnicalTraining@clearcom.com)

# VuePix and Infiled to Merge Brands for Oceania Region

VuePix and Infiled co-founders Cuono Biviano and Michael Hao are excited to announce the merge of two brands to reflect their 9 year partnership in order to strengthen the position in the Oceania region and to reflect their global reputation.

"We are extremely excited to combine the brands and grow our proven formula in technology and service delivery. Merging the two brands offers greater value and ROI opportunities to the global VuePix and Infiled network," says Cuono Biviano.

Michael Hao comments: "I am delighted with the co-branding, which is another step towards our commitment to the network and will continue to strengthen our market position in the region".

Joining forces will see combining the best of both brands, teams of specialists and their expertise, and a strong base of high-profile clientele.

## VUEPIX INFILED

Both directors Michael Hao and Cuono Biviano agree, that this strategic move of combining the brands for the Oceania region will allow them to further expand their horizons and continue to strengthen the brands in joined forces, leading the market to meet future requirements in managing the growth of both companies and to represent the next generation of outstanding service to our industry.

# Reynolds and d&b GSL System Rock BOA 2018

Photo © Mohit Music Photography

The Bangalore Open Air (BOA) which is undoubtedly India's Largest Metal Festival ran its seventh edition this year on 7th July on the outskirts of Bangalore. Reynolds Sound and Lighting Services from Bangalore were entrusted with sound, lights & roof trussing for this year's edition of the BOA.

A d&b audiotechnik GSL rig was used for the first time at the Bangalore Open Air, keeping in line with the massive d&b J series rig that's used at the parent festival Wacken Open Air and keeping with the ethos of the international edition where technical production is always given top priority, Nikhil V. Pai, technical director of the festival entrusted the responsibilities of the technical production to Reynolds, Bangalore. "I have always been impressed with d&b products and have used them regularly with artists that I mix for and opted to use the services of Reynolds for this edition of the festival as they have an extremely efficient crew and great gear to go with it," said Nikhil V. Pai.

Reynolds employed 20 GSL line array elements for this year's edition supplemented by 20 GSL Subwoofers in a cardioid delayed arc pattern. Systems were designed and aligned by Sohel Alexander Dantes from Reynolds. Some Meyer speakers were also deployed for front fills and side fills. Monitoring was via Meyer Sound MJF series stage monitors.

"I must say it was a very pleasant experience, not only on a personal level but professionally as well... the d&b audiotechnik system performed really well, plenty of clear SPL and a ton of subs. The band was very happy with the stage sound too! No issues whatsoever!! Good job by everyone!!" – Andy Garcia, FoH, Overkill.

"From the sound of it, seems like the d&b system was undoubtedly the preferred and best choice. Made this year's edition of Bangalore Open Air a roaring success!" – Salman U. Syed, festival owner.

Photo © Monti Music Photography

Harman India came on board this year, providing a Soundcraft Vi-3000 that handled all the mixing duties for FoH and Monitors. A Vi Stagebox was on stage for the patching of all inputs and outputs.

"I have always been an ardent believer in the amazing capability of the Vi series mixers and they are my go-to mixers for all the acts that I personally mix. I love the clarity, transparency and ease of operations with this mixer" says Nikhil, who also mixed FoH for one of the bands that played this year's edition of the festival. The FoH engineers of the visiting acts reiterated this, expressing that the Vi Series was their first choice in audio mixing consoles.

An equally impressive lighting rig consisted of 16 x Claypaky Mythos 2, 16 x Claypaky 700 HPE Spot, 16 x Atomic Strobes, 16 x LBT LED Washes, 26 x Par 64's, Martin Smoke & Haze Machines and 6 x 4 Lite Molefays, all controlled from a grandMA 2 Lite.

"I am extremely delighted with how the technical production was carried out by the crew this year and so are the bands and visiting engineers. I have personally been inundated with emails and messages on how good the system sounded and how flawlessly the changeovers were managed" - Nikhil V. Pai.

Also helping tirelessly with the changeovers and stage management were interns from Audio Academy, an audio engineering college based out of Bangalore. "I cannot be happier with the team I had this year and it is naturally a no-brainer for me to continue with the same alliances for the future editions of the Bangalore Open Air", says Nikhil.

# Prolight + Sound Shanghai 2018 Entrails on Enhanced Product Coverage

Prolight + Sound Shanghai (PLSS), the leading fair for Asia's entertainment, event and production technology industry, will return with an enlarged area of 48,000 sqm across four halls at the Shanghai New International Expo Centre from 10 – 13 October 2018. Compared to last year, the show's participating companies and brands have reached a record high of 650, which represents a 3% increase.

Visitors will have the chance to explore a comprehensive range of products and technologies, including pro audio, lighting, recording, production, stage and machinery, with numerous new and returning brands exhibiting this year, such as Axiom, Beta-3, Cybermotion, dBTechnologies, HARMAN International, JTS, Lightlink, Riedel, SE Audiotechnik, Showtex, TW Audio, and Yamaha.

As the premier trade platform of recording and production industry in China, PLSS presents a 6,000 sqm **Recording and Production Zone** with over 100 brands featuring the latest equipment and services for real-time and multi-track recording in networking and individual consumer markets.

The **Recording Software Quarters** comprise over 10 international music software companies led by the International Music Software Trade Association. Elsewhere, the four-day event continues to offer learning opportunities for best practice within the entertainment industry, with its enriched **PLSS Academy**, featuring:

- VPLT Event Management Training Course – A Guide to Contingency Planning
- Dante Certification Training @ Shanghai
- Recording Technology Forum
- Lighting and Visual Design for TV Production Seminar
- Acoustic Technology Course

A notable part of the fringe programme will be the **Concert Sound Arena**, which is one of the largest professional outdoor line array demonstration in Asia that features 20 leading audio brands.

Concurrently held with Music China, the show is set to be the biggest and most comprehensive entertainment technology and music event in Asia.

# MA Lighting and PRO AVL Join Forces to Support Vietnamese Programmers

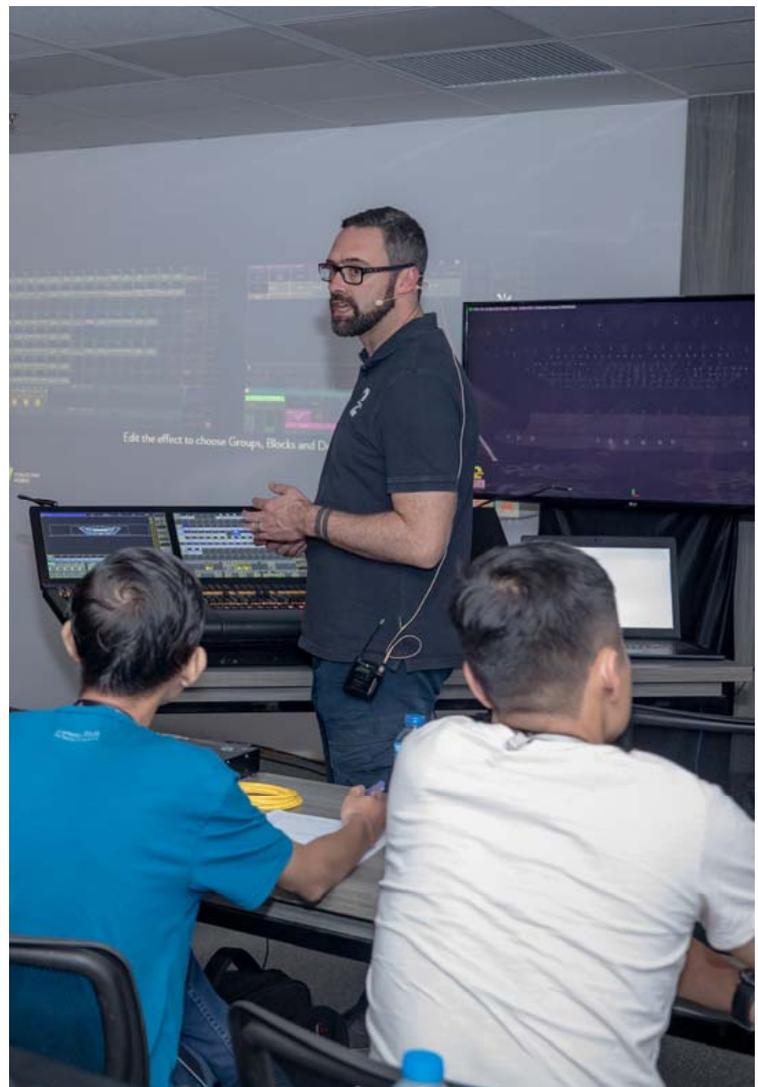

MA Lighting Asia Pacific with the support of their Vietnam distributor PRO AVL Group, recently organised a "Designing and programming strategies in large scale productions" workshop from 24-27 July 2018, in Hanoi.

Conducted by Joshua Cutts and Christopher Bolton, the hands-on workshop saw a room full of lighting professionals from various rental companies representing the different regions of Vietnam.

The workshop allowed the local lighting programmers a unique opportunity to look backstage at large-scale events, to gain deep insight into the show-files involved and above all, to learn from the massive experiences of the lecturers.

All attendees left with a greater understanding of how to use the grandMA console to a greater effect for their future shows.

With seven years experience in supporting the professional Audio-Video-Lighting market in Vietnam, the PRO AVL Group also exclusively distributes other brands as L-Acoustics, RCF, Midas, Claypaky, DTS, DPA, and Audio-Technica, and is now a leading distribution house in Vietnam.

# Adelaide Convention Centre Experiences the Spyder X80

Adelaide Convention Centre has acquired the Christie Spyder X80 multi-screen windowing processor to boost its capabilities in staging various events within its facilities.

With this acquisition, Adelaide Convention Centre becomes the first organization in Australia to have the Spyder X80 fitted in its premises. It also complements the impressive fleet of Christie projectors that the Adelaide Convention Centre has at its disposal, which includes several 3DLP® systems comprising Christie Boxer 4K30, Boxer 2K20, and J Series models.

“The Spyder X80 is the perfect fit for our venue given its powerful processing capabilities and flexibility, as well as full compatibility with the various Christie 3DLP high-brightness projectors that are already deployed within the Centre,” said Matthew Stanton, Technology and Venue

Operations Manager, Adelaide Convention Centre. “It offers many capabilities for different events and large scale experiences that help make display walls easy to set up and manage, while incorporating the latest standards and connectors. With an array of innovative features and benefits, I’m confident that the Spyder X80 will play an important role in fulfilling our display needs for the foreseeable future.”

Stanton adds, “We made significant investment in our event technologies as part of our recent \$397 million redevelopment. The addition of the Spyder X80 to our technology infrastructure further reinforces our market leadership and position as one of the world’s most modern and technologically advanced convention centres.”

# Martin Audio Appoints Sama Sound

Sama Sound has been appointed as Martin Audio's new distributor for South Korea.

"Since there have not been many opportunities for people in the region to listen to music via MLA so far, we strongly believe it is going to surprise a lot of people," stated Sama Sound president, Jason Inn. Training and product demonstration will follow in the aftermath.

In conclusion, he said, "Having looked carefully for opportunities to expand our product portfolio, we believe that with the acquisition Martin Audio we can now comprehensively service the market and grow together, increasing market share by developing synergy with our current partners. We are extremely excited about the new journey."

Martin Audio's APAC Account Manager, Andy Duffield responded, "Sama Sound

has enjoyed great success over many years in the Korean market, both in Rental/Touring and the wider installation market. With Martin Audio's proactive product strategy generating above industry growth in APAC both in 2017 and year-to-date, we felt the time was right for a change in our distribution to ensure success across all vertical markets."

"In looking for a new partner we were impressed by the professionalism, attention to detail and commitment to the brand shown by the team at

Sama Sound. This, plus their highly proactive and connected approach to the market, made the choice easy for us. We are thrilled at the prospects of working with Sama Sound in the years ahead."

# CCG Commits To Robe

CCG Director of Lighting Michel Khairallah (second from left) with his team of CCG lighting technicians

Creative Communication Group (CCG) is a rental, event management and production company based in Doha, known for its imagination and flair ... which has just made a large commitment to Robe moving lights with the purchase of new MegaPointes and Spider moving lights for its rental inventory.

CCG's director of lighting Michel Khairallah explained that as a busy rental operation over the years, they have dealt with moving lights from several brands. "Having had good experiences in the past with Robe's fixtures and knowing the reliability, toughness and quality of the light output, I was convinced that increasing our Robe stock was a solid investment". CCG was founded in 1998 by owner and CEO Jalal Dudin, and their first Robe purchases were made in 2008.

Michel also observes that "the market is moving towards Robe", and that he feels that the manufacturer is "the last remaining independent company that still delivers on its core values of high quality products utilising innovative and current technologies." He adds that the service and support from Robe Middle East run by Elie Battah has been excellent and that this also played a major part in the decision. "Elie and his team give absolutely 150% in terms of time and effort to support client needs and to process requests as quickly and efficiently as possible".

On the strength of all of this, CCG has just extended its commitment to Robe confirming the order of more MegaPointes and Spiders in 2018.

# Unilumin Unano Becomes a BIG HIT in Rental Market

From this September, fans attending events in Europe will be able to enjoy exciting moments on the new 1.8mm fine pitch rental screen Unano manufactured by Unilumin Group. This crossover between Rental and NPP (Narrow Pixel Pitch) LED displays has impressed the industry for its innovative design ideology of "Fine pitch to move" and becomes the spotlight on high-end applications such as conference, broadcast, exhibition, etc.

To keep up with an evolving demand of high-end rental market, event service companies in Europe embark on a significant investment in the latest technology ahead of next season. UK-based audio visual hire specialist Smart AV has invested in 200 sqm of Unano1.8, 50 sqm of which will be located at its head office in England. Sweden's Soundforce Scandinavia is partnering with Unilumin to apply Unano in international projects. Germany's Vision Tools has added Unano to hire stock to

provide the most advanced video solutions on the coming events. With Unano becoming a Big Hit in European Rental market, Unilumin Group commences on the same batch of Unano stock for cross rental that will power up customers' capability of providing large screens in events.

## ***WHY do customers choose Unilumin Unano for fine pitch rental use?***

Firstly, Unilumin owes extensive experience on both rental and fine pitch products development as well as manufacturing and quality control. Secondly, Unano featured with PPM (Popping-up Protection Mechanism) can effectively prevent hitting during operation, which is customers' top concern when using fine pitch product. Thirdly, Unano with HDR (High-Dynamic Range) processing technology brings the most impressive visual experience on showtime.

# Mahajak Development Scores Big at Mitr Phol Stadium

Mahajak Development has installed a complete audio system by HARMAN Professional Solutions at Mitr Phol Stadium. "We required a customized audio solution for the new stadium that would deliver consistent coverage and vocal clarity for announcements and music performances," said Tanawat Nitikarnchana, Vice President, Ratchaburi Mitr Phol FC. "Mahajak supplied us with great customer service and a state-of-the-art HARMAN system. We're highly satisfied with the HARMAN system, which provides exceptional audio quality and perfect coverage, no matter where you are in the stadium."

For the stadium's main PA, Mahajak deployed the JBL PD500 Series, a line of horn-loaded loudspeaker systems with patented WRC weather protection and WRX extreme weather finish for outdoor stadium use. The respective 60° x 40°, 60° x 60° and 90° x 50° horn coverage patterns of the PD564-WRC, PD566-WRC and PD595-WRC speakers enabled Mahajak to optimize system performance in each area of the stadium, delivering clear and balanced coverage in the grandstands, on the field and behind the goals. Highly weather-resistant JBL AWC129 compact loudspeakers provide additional support for fans sitting beneath the roof of the upper deck.

Every component in the system is centrally controlled via BSS Soundweb London BLU-100 and BLU-50 audio processors, and HiQnet-integrated Crown CTs 1200 power amplifiers. For mixing, Mahajak equipped the stadium's control room with a Soundcraft M-Series analog console, which offers intuitive audio control over live microphones and music playback sources during matches.

# Elation Lighting Adds Unique Touch to Cove Manila

Cove Manila is Southeast Asia's newest entertainment space, touted as the largest indoor beach club in the world. Located in Okada Manila, a five-star integrated resort in the Philippines capital, Cove Manila also includes a luxurious nightclub that's putting the country on the map as an EDM stop for top DJs. The entertainment technology package used to dress the venue in lighting and visual effects is, not surprisingly, large with a host of top manufacturers involved including Elation Professional and sister companies ADJ and Acclaim Lighting.

"There are 16 different types of fixtures in the club which ensures that every event and show is unique," states Ted Mizrahi of Mizrahi Show Designs, who serves as technical director for the space and is responsible for everything entertainment technical, including the lighting and visual design.

Mizrahi uses Elation Cuepix Blinder WW2™ fixtures to cover multiple lighting roles in the space. Mounted in each palm tree, in the centerpiece chandelier, on the main stage truss and in the DJ booth, the white light LED blinders are used for blinding, strobing, washes, chases and even function as work lights. "We looked at architectural wash fixtures but they were very expensive," the designer explains. "We chose to use Cuepix fixtures. They are versatile and are good for an even wash of light, are bright and spread light well in the massive space." Also used to light the Beach Club stage area are Elation SixBar 1000s™ color-changing batters, as well as Elation ELED Fresnel II™ warm white wash lights.

#### Cove Night Club

- 34 x Elation Cuepix Blinder WW2
- 28 x Elation ACL 360 Bar
- 24 x ADJ Pocket Z4 Wash Zoom
- 130 x ADJ Flash Kling Batten
- 72 x ADJ Pocket Spot
- 8 x ADJ Crazy 8
- 8 x ADJ Asteroid 1200
- 12 x ADJ Illusion Dotz 3.3
- 16 x Antari M-7

#### Cove Beach Club

- 16 x Elation Cuepix Blinder WW2
- 10 x Elation SixBar 1000
- 8 x Elation ELED Fresnel II
- 48 x ADJ Pocket Z4 Wash Zoom
- 4 x Antari M-7

Among the venue's efforts to minimize the environmental footprint while saving on power and bulb changes is a reliance on all LED fixtures.

The Elation, ADJ and Acclaim lighting, as well as the Antari M-7 LED fog machines used in the venue, were supplied by Pacific Technical Products Pte Ltd (PTP) through their local supplier Maxitech.

# Yamaha Enhances the Sound of Walkerhill Hotel & Resort

The Walkerhill Hotel & Resort boasts one of the best views of South Korea's capital, Seoul. The management of the hotel and its trio of high-end venues recently returned to its owners, SK Networks, which has made a significant investment in upgrading all three, including the installation of Yamaha audio equipment. The investment has included new conference facilities at Grand Walkerhill Seoul and new audio systems at Aston House and Vista Walkerhill Seoul.

SPL Integrated Solutions, Korea, was entrusted with the supply and installation of new AV equipment under the guidance of owner Hwang Jun Ho. "I was familiar with the existing audio systems at the hotel," he says. "When I was asked to recommend solutions for the upgrades, I suggested Yamaha equipment because I have used and trusted it for many years." He continues, "It was really important for the quality of the sound to match the sophisticated atmosphere

being created at the Vista Walkerhill Seoul and Aston House. In addition, the new conference facility in the Grand Walkerhill Seoul's ballroom needed a sophisticated audio system, because it can be used as one large space or subdivided into up to six separate rooms. This required the audio system to be extremely versatile and able to be configured accordingly."

Left-Right: Hwang Ho Jun (Walkerhill sound manager) & Hwang Jun Ho (Owner, SPL Integrated Solutions)

After demonstrating Yamaha solutions to the hotel's management, Hwang Jun Ho and his team installed Yamaha ceiling

speakers in the public spaces of the Vista Walkerhill Seoul, which blend in tastefully with the contemporary décor.

The background music is supplied by a computer-based playback system with sound distributed to the lobby, bar area and VIP lounge, via one of the complex's many Yamaha digital mixers.

### **Yamaha equipment at Walkerhill Hotel & Resort:**

#### **Grand Walkerhill Seoul Hotel**

- QL5 digital mixer
- MTX3 matrix processor
- Rio3224-D I/O units
- Rio8 output units
- XMV series power amplifiers

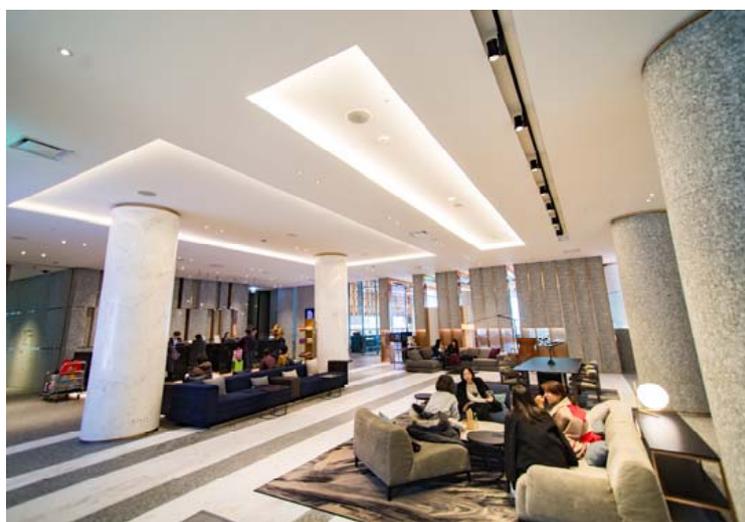

#### **Vista Walkerhill Seoul Hotel**

- VXC series ceiling loudspeakers
- QL series digital mixer.

#### **Aston House**

- TF3 digital mixer
- MTX3 matrix processor
- VXC6W ceiling loudspeakers

A similar system in Aston House delivers high quality background music via Yamaha ceiling speakers, with a digital mixer allowing extra inputs for presentations and entertainment. A more comprehensive system is installed at the Grand Walkerhill Seoul's new conference facility, based on a comprehensive Dante audio network and managed by a Yamaha matrix processor, with Yamaha I/O units, amplifiers and further digital mixers. The system is controlled and monitored from a hidden control room, which ensures the audio matches the configuration of the space at all times.

# YAJIANG Lights Up Boao Asian BFA

Boao rural town was an unknown fishing village of Qionghai, Hainan province, until it is famous for Boao Asian BFA. Boao stands in a corner of the city, at the foot of hills and beside rivers. In the daytime, it is quiet and silent, while in the evening, Boao looks like a latent dragon in the decoration of the Yajiang AM746XCT and a variety of different effects, showing "the world, the dominant".

Boao Jinjiang Hotspring hotel is an international seaside resort with beautiful sceneries of river, lake and sea, which is not far away from the convention center of Boao rural town. The hotel building takes Yajiang SS347SWT, which is safe, reliable, easy

to operate and can perfectly present the concentrated effect, as the light source carrier creates the warm and elegant light environment for the hotel in the dark landscape, it brings the night leisure life for the people in a busy day.

# Ayrton Ghibli Lights Up Amadeus in Seoul

Tongsuh Technology sales team with CEO Hyun Shin

Tongsuh Technology Co., Ltd, Ayrton's exclusive distributor for Korea, has sold 12 Ayrton Ghibli™ LED spot luminaires to Art Won+ Stage Lighting Co., Ltd for its production of Peter Schaffer's Amadeus, which ran for two months at the Gwanglim Church BBCH Art Hall in Seoul.

The production's beautiful lighting design was created by You Sub Won, Principal Lighting Designer & CEO of Art Won+ Stage Lighting, who was extremely impressed with the Ghibli luminaires.

"I first saw Ghibli when Tongsuh brought it to me for a demo and I instantly fell in love with it. We know the trend in the market has been towards LED moving spots and we particularly liked Ghibli's excellent dimming quality - the dimming

curves were as smooth as those you get with tungsten. It is a very silent fixture with an attractive design, qualities that are both very desirable in the 'open plan' environment of the theatre."

For Amadeus, the units were positioned around the theatre's apron stage, around the front, sides and balcony, and used as a proscenium set arch for front lighting.

Mr. Won added, "The framing feature of the Ghibli was very useful in this situation to cover those angles created by the apron stage, and we liked the fast gobo replacement feature, which was very easy and convenient to do."

## Adamson Gets Shanghai Shaking

After much anticipation from EDM fans in the world's most populous nation, the now-iconic Electric Daisy Carnival presented its first-ever Chinese edition in Shanghai. EDC's four stages: the instantly-recognizable kineticFIELD main stage; the smaller circuitGROUNDS; the bassPOD for low end lovers; and the Boombox Art Car. For both PA and monitoring, all featured Adamson on every stage thanks to the company's exclusive Chinese distributor, Real Music.

Stephan Themps, FOH engineer for Martin Garrix, says that E-Series has become his favourite system to mix on. "Adamson delivers maximum impact every time – crystal clear with punchy bass and plenty of headroom, which is precisely what we want," he says. "Our last experience with Adamson and Real Music at the ISY Festival was flawless, they knew exactly what we needed for a great show."

The kineticFIELD system was built around Adamson's E-Series, with the

main PA comprised of 15 E15 three-way, true line source cabinets and three E12 three-way, full range cabinets per side. The side arrays were slightly smaller, with 12 E15s and three E12s per side. Kicking out the low end were six flown E218 subwoofers per side, plus 36 E219s and 12 T21s groundstacked at the front of the stage. Finally, Adamson's compact S-Series was deployed for front fills and in the VIP area, as well as in the DJ booth, with stacks of three S10 two-way, full range cabinets atop two S119 subs keeping the DJs in the mix.

Hardwell onstage  
with Adamson  
S-Series monitors

The circuitGROUNDS system are anchored by the E-Series, with main arrays of 12 E15s per side and outfill arrays of six E12s per side. Bass came courtesy of eight flown E119s per side along with a complement of 36 E219s on the ground. S10s were deployed for front fill and in the DJ booth atop two S119 subs. The bassPOD and Boombox stages were each built around Adamson's S-Series, which packs the proven tour-grade performance of the E-Series into a more compact cabinet.

# DREAMWEAVERS

EVENT CREATORS & PRODUCERS

DREAMWEAVERS.COM.AU

(from left)  
John Harris,  
Dreamweavers'  
Founder;  
Wayne  
Grosser,  
Clair Brothers  
Australia;  
Sam Pomana,  
Dreamweavers'  
GM; and  
Kyle Hodges

## kiTCurve Guides Dreamweavers Sound to Higher Ground

Dreamweavers is an event production company serving as a world-class, full-service force in integrated event creation and production. Having put on more than 4,000 events in just fifteen years, they know well what it means to exceed client expectations of being on time and on budget, all while using the best equipment the industry has to offer. Which explains why Clair Brothers is now an integral part of the Dreamweavers arsenal of state-of-the-art gear.

"We were invited by Wayne Grosser, Clair Brothers' rep here in Australia, to take a listen to a full range of Clair Brothers systems," explains Sam Pomana, Dreamweavers general manager. "Wayne is familiar with our mission to stay on the cutting edge of event production innovation. He knows

we have to – the nature of our creativity depends on it." According to Grosser, the Clair Brothers kiTCurve system seemed like the perfect fit.

Kyle Hodges, Dreamweavers audio engineer and producer puts it like this, "Wayne took the opportunity to demo several Clair Brothers systems for us as points of reference. They all sounded incredible, the kiTCurve boxes were phenomenal and really stood out performance-wise." Adds Pomana,

"The kiTCurve's size and weight were an unexpected bonus in addition to the incredible sound. Many of the events we produce are held in hotel ballrooms where rigging is limited. So, our ability to rig this system in tight spaces with minimal weight loading is huge.

Another bonus is that our truck space and crew requirements are cut in half. That's cost savings we pass along to our clients."

A recent event produced by Dreamweavers was a cocktail event on the Gold Coast. The ballroom event included performances by two bands and three acrobatic troupes.

"The Clair Brothers system we used for this show was comprised of four kiTCurves with four kiT-Sub-minis. It did the job beautifully and the sound was enormous," describes Kyle.

"The kiTCurve box sells itself, really," says Pomana. "For me the big picture value has come from Wayne's commitment to the Clair Brothers brand and service. His continued support has been nothing short of outstanding. His knowledge and ability to mix live sound is some of the best I've seen anywhere. We're truly privileged to have him working with us."

On the technical side, Dreamweavers runs a CL5 console in addition to a fully integrated Dante network system including the LAKE LM44 processor and the kiTCurve system. With one CAT5e cable from the CL5, the team has access to 32-channel RIO rack, eight channels of Shure digital wireless mics and four channels in/out of the Lake LM44 that converts the digital network signal to analogue, which is then sent to the kiTCurve system.

kiTCURVE Full Range Loudspeaker

"This rack is awesome and is a one stop shop for everything we do at Dreamweavers," explains Hodges. "Thanks to the LM44 and Dante, everything gets received and sent from one place." When asked to sum up Dreamweaver's experience with the kiTCurve system, Hodges smiles,

"It has been nothing but amazing and reassuring. It's an incredible product that surprises us every time we turn it on. And when you consider the years our team has been doing event production, that's really saying something."

# Atlona Launches Two-Day Technical Workshop Series

Jaipur Workshop

advance of purchase of installation," said Sanket Sawant, Atlona's director of business development Middle East, India and Southeast Asia.

"This event ensured every attendee could see, feel and test each product individually across a series of dedicated live stations anchored through a working demonstration of our All-IP Meeting Space concept."

Atlona is amplifying its global On-Tour Roadshow Series with focused two-day events that emphasize live, personalized hands-on demonstrations for dealers, consultants and end users. The first of these enhanced "Zero to 60 Hz" events recently wrapped in Jaipur, India, with 35 attendees enjoying detailed demos and intimate Q&A's across dedicated time slots.

Co-sponsored with Telso Networks at their office in the G-3 Regal Residency in Jaipur, the idea was born out of partner requests for technical workshops that go deeper into product use and system architecture than larger Atlona Academy training and education events.

"As our partners and end customers move away from circuit-based systems and to the network, there is a greater desire and urgency to put their hands on this latest generation of products in

# ISHCMC Shines a Spotlight on Student Talent

The International School Ho Chi Minh City has been equipped with a complete networked AV and lighting solution by HARMAN Professional Solutions.

"ISHCMC's administrators wanted high-quality audio and lighting solutions with seamless control for their new theater building," said Nguyen Khac Anh, CEO, Ba Sao Investment.

The entire system is powered by Crown XLi amplifiers and networked via BSS Soundweb London BLU-100, BLU-BOB2 and BLU-DA signal processors for unmatched sound quality, reliability and user control.

Ba Sao included a Martin M2GO HD integrated PC-based lighting controller and a range of AMX encoders, decoders and transceivers to give ISHCMC's staff intuitive control over the sophisticated AV and lighting system.

To ensure premium sound reinforcement for productions in ISHCMC's new theater, Ba Sao Investment installed JBL AE Series speakers. Compact AC25 and AC18/95 speakers and AM5212/00 two-way speakers provide excellent coverage, adjustable waveguide and low distortion. ASB6112 18" subwoofers offer the extended low-frequency bandwidth needed to produce an impactful theater audio experience. For critical listening and mixing tasks in the theater, the team included JBL LSR305 studio monitors and AKG K240 MkII headphones.

# ARX Systems Blue DI Gives Ultimate Choice in Myanmar

The Blue DI wireless Active Direct Box Interface from Australian manufacturer ARX Systems is literally proving to be “the product of choice” for bars and restaurants when it comes to a smart, professional solution for playing music.

As a wireless audio interface for computers, smartphones and tablets, the ARX Blue DI connects these and similar devices to the balanced line level pro audio world. By simply pairing the Blue DI to a wireless enabled device, it is easy to pull up a music file and press play and listen to music through a professional sound system.

At the Byblos Pub & Grill in Yangon, Myanmar, the ARX Blue DI is proving a great hit with the management and the customers. A tablet controls the music in the bar which is connected to the Blue DI via wireless protocol. Selected customers who come into the bar can connect to

the Blue DI and then play their own music over the Quest Engineering sound system.

“The guys at Byblos are passionate about the Blue DI and their customers love the fact that they can play their own music,” commented Trevor Cronin from Sound Around Myanmar (ARX distributor in Myanmar).

The Blue DI is the only Bluetooth compatible Direct Box that can be Phantom Powered, eliminating the need for clunky and unreliable external power packs when used in professional environments. Additional design features such as the ultra-low noise and distortion circuitry, electronically balanced XLR outputs and a heavy duty all steel chassis complete the Blue DI package.

# TDC Shines at Vivid Sydney 2018

Australian entertainment technology company TDC – Technical Direction Company – provided large scale projection mapping and technology for Vivid Sydney 2018.

TDC is providing video services and innovation to over 10 sites for Vivid Sydney this year. There is record breaking projection across the major precincts at 10 locations: Sydney Opera House, Customs House, ASN Co, The Old ES Bank and Police Station, Government House, Museum of Contemporary Art, Cadmans Cottage, Chatswood Concourse, Samsung – “The Night. Reimagined.” and the Sydney Harbour Bridge South Pylon.

“TDC Live View feedback systems are deployed everywhere, allowing real time monitoring,” continued Alex Rendell, Technical Projects Manager at TDC. “Projections were finalised mostly in the pre-production phase, so everything is built before we turn up on site - which reduces down time,” said Lynn.

The centrepiece of Vivid Sydney 2018 is Metamathemagical, which transforms the world-renowned Sydney Opera House sails into a series of kinetic digital sculptures. Laser-projected images are delivered onto the 9,000 square metre sails. The projectors feature 4K/UltraHD resolution; that’s four times the number of pixels of HD, and means that they deliver 138,240,000 pixels to the sails – equivalent to four IMAX screens – with startling clarity and colour fidelity.

“In creating the Sydney Opera House projections project, a 3D model was constructed and by using a disguise media server we were able to visualise the content playback with the animators

Photo © TDC

in the preproduction phase,” said Steve Cain, Head Engineer & Media Server Specialist at TDC. “This is the world’s best media server and calibration technology and it is so reliable and robust. I used a collection of features that disguise media servers offer, such as Texture Masking, Deformation Layers, Projector Calibration and Colour Shift options. Also the real time work flow let me sit with the Jonathan Zawada and colour grade the content live on the sails of the Sydney Opera House. We also used the Multi Editor feature, to allow a couple of us to line up the building simultaneously reducing the projector line up time to just a few hours.”

Photo © TDC

*"This year, we designed a new outdoor projector housing solution that was resistant to high winds, and that could operate reliably close to salt water and at low temperatures," - Anthony Pellizzari, Technical Projects Manager, TDC.*

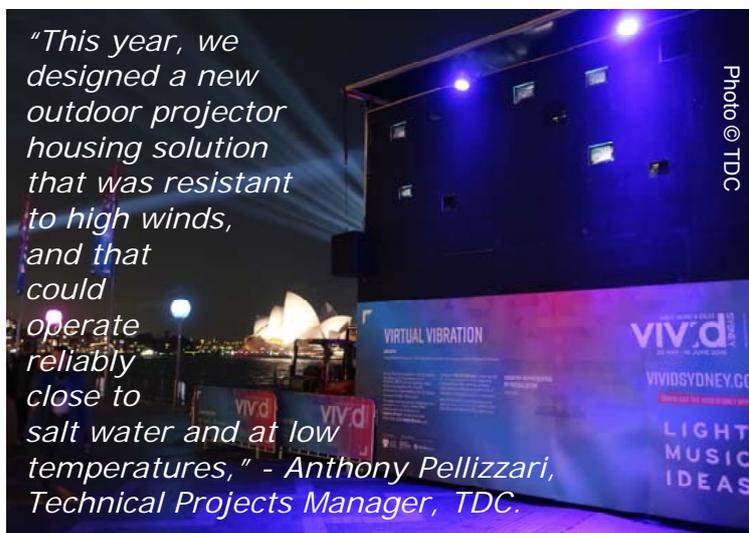

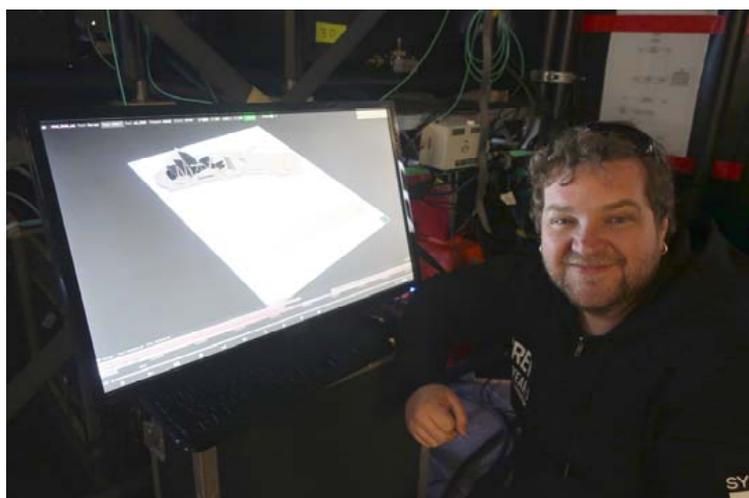

Photo © TDC

### Fun facts about tech

- As well as using laser projection on the iconic sails for the first time, other highlights of TDC's involvement in creating the wide-ranging spectacular include:
- Over 30 technical staff working full time
- 70 video projectors, with brightness up to 40,000 lumens
- 20 million pixels - equivalent to over 60 IMAX screens
- Total light output of 1,750,000 ANSI lumens brightness
- 11 kilometers of projection
- 22 media servers
- Three different automation platforms servers running on unique software code
- 20 kilometers of signal and power cables
- All sites remotely monitored with realtime "TDC Live View" remote reporting 24/7.
- To ensure energy efficiency, equipment is powered every night but on-standby during the day.

## Double Dose of MILOS Training

MILOS was busy this year holding their annual Product Academy at its HQ and factory in Roudnice nad Labem, Czech Republic, and in its factory Guangzhou, China. The Product Academy has been designed to provide attendees with the knowledge and skills they require for working safer and more professionally while carrying out rigging duties and constructing support structures.

The Product Academy in China included participants from China, Thailand, Hong Kong, Singapore, India, as well as from Australia, New Zealand and Kenya. The two-day academy was a team effort by professionals from both inside and outside of MILOS. Eric Porter, certified rigging consultant and internationally renowned rigging professional, gave rigging presentations and provided rigging consultations. Norbert Tripp, Area Four Industries Technical Director and structural engineer, held presentations that covered the ins and outs of static

calculation theory. Both took questions from participants, going into deeper group and one-on-one discussions to provide answers and give practical advice on rigging procedures and working safely with various structures. MILOS Sales Coordinator, Michal Zykan, covered truss design, while Brand Manager Marek Zubor took workshop participants on tours of the factory.

Men at Work's (India) Mankaran Singh, who attended the workshop in China, summed up the general feeling of all attendees when saying, "Thank you for the wonderful workshop at your Guangzhou factory. It was a pleasure having met some new faces and discussed important rigging concepts at length. Your technical support and hospitality remains unmatched. I look forward to attending more workshops in the future and enhancing my knowledge."

# Event Technologies Illuminates the Biggest Stages In Australia

lights are known as the workhorse fixture in Australia, but the range and the dimming curve of this fixture really impressed me — especially at low intensities. Whenever we rent the MAC Quantum Profile to

Event Technologies recently updated their inventory with Martin by HARMAN MAC Quantum fixtures, provided by Show Technology, to deploy for concerts, musicals, corporate functions and more.

Event Technologies is a leading AV production company that delivers professional audio, video, lighting and staging solutions for theatres, corporate functions and events on the biggest stages in Australia. Event Technologies also provides solutions for other AV production companies—and MAC Quantum Profiles by HARMAN are in high demand. In order to meet the needs of their customers, Tom Bayford, Technical Director at Event Technologies visited the Show Technology office in Melbourne to see the MAC Quantum Profile fixtures in action.

“The MAC Quantum Profile ticked all the boxes for me,” said Bayford. “Martin

clients the feedback is always overwhelmingly positive.”

“Event Technologies thought the MAC Quantum Profile was too good to be true, but after visiting our office and experiencing it for themselves, they quickly realized it was the perfect fixture for their needs,” said Keith Bradshaw, Technical Sales VIC, Show Technology.

“The lightweight Quantum Profile is easy to transport and convenient to install at events,” added Bayford. “Their ability to work in low-power setups allows me to deploy them in any venue, including those that don’t have a three-phase power supply. It’s versatile enough that it can pack a punch on the biggest of stages, or be used unobtrusively in a small black box space on low fan mode.”

[www.harman.com](http://www.harman.com)

# Christie Mystique Install Software Gets Updated

Christie® has introduced a major update to Christie Mystique Install, a software that configures, aligns, warps and blends complex multi-projector arrays.

With Mystique Install – Large Scale Experience (LSE) Edition, recalibration of complex projection mapping on 3D surfaces now just takes a single click. Mystique Install – LSE detects any changes in projector or camera positions and automatically corrects the blended image using a camera-based alignment system. Featuring markerless calibration for projection mapping on 3D surfaces, it eliminates the need for screen or object markers. Mystique Install – LSE reduces maintenance and labor costs for 3D projection mapping projects, eliminating the time and expertise it can take to set up a complex system using an unlimited number of cameras and projectors. Additionally, it works with either Christie 3DLP® projectors and a 3D media server or the Christie Pandoras Box media server and third party projectors.

**Mystique Install** – Essentials Edition  
**Mystique Install** – Pro Venue Edition  
 Both feature Christie Guardian, a new solution that can correct projector alignment even when content is playing.

Guardian works exclusively with the Christie Boxer Series and the all-new Crimson Series of 3DLP® laser phosphor projectors. Unique to Christie, Christie Guardian does not require light patterns to align and blend the image to the screen – instead, the software automatically scans for misaligned blended images and, while the content is playing, almost instantaneously realigns them without stopping the visual experience or displaying a visible test pattern so audiences are unaware of any problem. Using Christie Guardian means no costly downtime, making it ideal for applications such as sports venues and live events where projectors can be bumped when content is playing or image degradation can occur over time.

*Christie Guardian is available with Mystique Install – Essentials Edition and Mystique Install – Pro Venue Edition when using Christie Boxer or Crimson Series projectors. Mystique Install with 3D camera based alignment is available with Large Scale Experience Edition.*

# MegaPointes on Isracard Event

Light architects Cochavi & Klein produced a show-stopping lighting designs for a huge event for financial services giant, Isracard, staged in Tel Aviv.

Eran Klein operated the lights working closely with stage designer Omer Israeli, Cochavi & Klein's project manager Dor Aichner and video designer Rubi Saati of Studio Vega.

Omer and Eran chose Robe moving lights to deliver serious impact and effects, with 12 x Mega Pointes - used for the first time live in Israel - plus 30 x Pointes, six Spiders, eight BMFL Blades, eight 8 x BMFL Spots and three Patt 2013s on the rig.

Eight BMFL Spots were used upstage at the back for beam work and effects behind the bands, with the eight BMFL Blades downstage providing tight and accurate key lighting utilizing the shutters.

The Spiders were positioned for doing cross and side lighting onstage from the two 'city' towers.

Pointes were rigged on top of the 'city' towers, with the MegaPointes deployed in a line behind the musicians.

These were the first - and at the time the only - MegaPointes in Israel, so Eran fully enjoyed being the first LD to be able to give them a serious road test!

Other lighting fixtures included sun strips, strobes, magic blades, and blinders. Lighting, sound and rigging for the event was supplied by one of the leading Israeli rental companies, Simul Argaman.

Photo © Tomer Foltyn

Photo © Tomer Foltyn

Photo © Tomer Foltyn

Assisting were technical producer Itamar Bar Shavit and lighting crew chief Haim Makim. LED screens were supplied by ScreenLED, staging by Irgunei Bamot and the bespoke chandelier was constructed by Sami Chandelier to Omer & Eran's specification.

# Twin Towns Switches on its Multi-million-dollar Lightshow

The first in Australia and definitely the most spectacular border lighting show in the southern hemisphere has been launched by Twin Towns as they unveil their new dynamic state of the art digital media façade. The ULA Group was engaged in this project from the early concepts, working close together with the team at Twin Towns, managed by CEO Rob Smith. "We're thrilled, we're excited. We have turned the vision into a technical reality, and we couldn't be happier with the result," says Cuono Biviano, Managing Director of the ULA Group.

The 'huge digital canvas' seamlessly incorporates high and low resolution digital LED technology, with over 2.3 million LEDs providing an infinite colour range. All of the products have been manufactured to the highest standards and are utilizing the most advanced technology on the World's market. The centrepiece of the media façade is the high-resolution 17m wide x 5m high VuePix customized curved screen, consisting of almost 800,000 pixels.

The energy efficient Global Media Series from VuePix has been specifically designed for fixed outdoor applications, offering the best balance between weight and durability to withstand harsh environmental factors. Behind the screen, a low-resolution backdrop spreads across the 'cotton reel' façade, bringing the entire building to life.

The backdrop consists of 5,900 customized LED architectural nodes, which are programmed and integrated within the whole lighting show. Over 424m of DigiFlex linear architectural LED strips have been used to highlight the unique silhouette of the building.

Griven Architectural luminaires were used to complete the illumination of the entire complex to provide depth and vibrance to every angle of the Twin Towns' structure. These included 20 x Jade spotlights, 8 x ParadeX linear luminaires, 10 x Zaphir and 14 x Coral high-powered washlights.

# Vista 5 for Asia's Got Talent

Mahajak Trio has supplied veteran Audio Director John Simpson with a Studer by HARMAN Vista 5 digital mixing console for the second season of "Asia's Got Talent". Episodes are filmed live before a studio audience at Marina Bay Sands in Singapore and Pinewoods Iskandar in Malaysia. Astro hired Mahajak Trio Electronics to provide the show with a broadcast audio mixing solution with premium sound quality and an intuitive user interface. Mahajak selected a Studer by HARMAN Vista 5 mixing console for its innovative features and user-friendly operation.

"The producers wanted to be sure that the production audio was superbly mixed using the best equipment," said Lee Chin Kah, Senior Technical Manager, Mahajak Trio. "The Studer Vista 5 we provided met all of their technical requirements, is easy to use, and offer advanced functionality and the best sound quality in the broadcast market today."

As a long-time user of Studer mixers, one of Simpson's favorite features is vMIX, an automated microphone-mixing algorithm based on gain sharing. vMIX helps Simpson keep complex mixes with several active microphones under control during on-air performances. "The producers wanted to make sure I had the best tools at my disposal, so I asked for a Studer Vista 5. We used software version 5.1 along with the excellent vMIX automated mixing function. vMIX automatically adjusts all open microphone levels based on who's talking at any given moment. It's the best automixing algorithm I've heard yet—it mixes faster and better than we ever could!," said Simpson.

With modular d21m stage boxes, the Vista 5 offers a powerful I/O system to handle the high number of inputs and outputs used in broadcast production.

# Martin Audio Appoints PTC

Martin Audio has appointed Mumbai-based Preeti Trading Corporation (PTC) as its new distributor in India. The family-owned company has been in operation since the start of the new millennium with a goal to become the leading AV residential and commercial installation company in the sub-continent.

Rationalising the decision to approach Martin Audio, managing director Kamal Dhingreja said, "All our dealers carry out installations as well, and had been dependent on traditional brands. So we decided to make Martin Audio available as a performance product, which sets them apart from regular integrators."

He said that Martin Audio's brand value was well recognised in India. "It is highly regarded for its sound quality," he said. "We have taken the initiative in working with the top integrators on their projects, and also to reach the best business houses on the Indian map through our sales team."

PTC will be looking to establish the CDD installation series at an early stage, along with BlacklineX, while they will also address rental staging requirements through their regional channel partnerships.

After making the products available for major integrators, PTC will be planning demo spaces in dealer stores and

PTC co-director  
Kamal Dhingreja

PTC co-director  
Vijay Dhingreja

participating in exhibitions, such as the recent PALM Expo India. Speaking of the appointment, Martin Audio's APAC Account Manager, Andy Duffield, stated, "Martin Audio has a long-established reputation in India for innovation, sonic excellence and build-quality."

"As Martin Audio's product range expands to encompass a wider range of applications and price points, it has become clear that we needed a distribution partner with a wide access to dealer channels across India in order to maximise market penetration across all ranges, throughout the country. Preeti Trading Corporation provides that capability. We are excited to welcome them to the Martin Audio family and are confident that, with their help, Martin Audio's successes in India will go from strength to strength."

# GECKO Chosen for Wesley Methodist Church

console, and a unit of GECKO® EXODUS ATOM MXR 1208A powered mixing console, all with advanced C.R.I.S.T.A.L.® Audiophile technology. The 'minimalist concept' system upgrade was designed by Sam Tai, Technical Head of GECKO® Borneo, without treating the hall acoustics.

"Now with the GECKO® C.R.I.S.T.A.L.®

Wesley Methodist Church in Sarawak, continues to stand out as the only church in Sibu that conducts worship services in English. On the recent sound system upgrade, the 350 seating capacity sanctuary of Wesley Methodist Church has benefitted from very much improved speech intelligibility, ease of handling, enhanced visual aesthetics and expanded multimedia options, with installation of GECKO® audio system anchored by a pair of GECKO® REVELATION SR 615RF 15" speakers, a unit of GECKO® EXODUS ALPHA MXR 1800 mixing

Audiophile system in place, we have noticed a tremendous improvement on sound clarity and quality for both speech and music. The sound is very comfortable to the ears with

every details heard clearly and evenly all across the sanctuary even though with only one pair of speakers

driven by a low-powered active mixing console. The GECKO® AYERS ROCK DI boxes are impressive too! The entire system is very easy on our crews."

# MegaPointes on Top in Hong Kong and Macau

Photo © MacPherson Festival by KRIZZ

Top One Design Engineering is the first Hong Kong & Macau rental company to have these latest Robe luminaires in stock - 24 MegaPointes and 60 LEDBeam 150s – and that is because company founder Kurt likes to offer the latest products in the rapidly changing world of entertainment technology.

Kurt and technical director Sam Hui had been keeping an eye on both of these Robe products for some time, they explained, and were “blown away” with the first demonstration which was organised by Raymond Wong from Robe’s HK distributors, Arc Source. “The MegaPointe has far superior functions in both quantity and quality when compared to other lights in a similar class,” says Kurt, highlighting the animation wheel and prisms in particular. However it was the incredibly light 26Kg

weight of the fixture which made this purchase a “no brainer” for the company. The LEDBeam 150 was also chosen as ideal for its small size and footprint together with “a seriously powerful punch and its superior colour performance and mixing”. Kurt, Sam and the Top One team are all ecstatic with the purchase.

Top One Design Engineering is one of the busiest lighting design and supply companies in Hong Kong and the Asia Pacific region. With over 25 years of combined experience in the events industry, they bring huge knowledge as well as a fresh and invigorating approach to lighting and visual concepts, producing bespoke lighting designs and solutions for a lively mix of events.

# ULA Group Illuminates the Heritage and Future of Queensland

The iconic Forgan Smith building in Brisbane has recently undergone a project of architectural illumination of the front façade of this heritage-listed building. The ULA Group team worked closely with the lighting designer Deepi Naru from WSP Group and lighting consultant Cameron Gunning from Vision and Sound Technology (VAST).

The LED lighting system chosen for this project consists of high-powered Multichip LED Washlights illuminating the left and right hand side building entrances and custom black finish LED high lumen output compact fixtures illuminating the building sandstone facades. All the luminaires are equipped with Lumen Radio CRMX DMX receivers and are integrated into the wireless system control network, running on a Pharos architectural control platform.

The lighting fixtures are arranged in the clusters of 2 luminaires in each cluster, in a configuration of 45 degree and 26 degree beam angles to ensure an even coverage of light over each section of the building façade – the 45 degree fixtures illuminating the bottom half of the façade and the 26 degree optics used for the top half of the façade.

Cameron Gunning comments: "All luminaires supplied are RGBA, in keeping with Deepi's vision of creating a very warm colour palette, to achieve a stately illumination result, with ultimate flexibility for colour choice for any UQ events. All installation was coordinated by UQ and final colour selection to achieve the classic UQ corporate purples and greens was overseen by Terry Cronk. Each colour is tuned and balanced to really highlight the beautiful sandstone surface. The project is remote access capable via networked computers and authorized smart phones, to ensure UQ have state of the art control solution for their prized iconic building".

# Hibino Deploys Full JBL VTX System at Billboard Live TOKYO

Billboard Live TOKYO has upgraded their sound system with a full JBL by HARMAN Professional VTX Series solution provided by sound and visual specialists Hibino for an unrivaled concert experience.

“The level of detail that the VTX Series provides is exactly what we were looking for,” said the planner of Billboard Live TOKYO. “When we were listening to CDs during the system tests, the VTX Series made us feel like we were actually in the recording studio-. They can recreate every little detail of a performance—you can even hear performers breathing on stage.”

Billboard Live TOKYO also used the upgrade as an opportunity to reconfigure the design of their sound system for more efficient low-end coverage. Located within the Tokyo Midtown complex in Roppongi, the venue sprawls across three floors, making it difficult to deliver sufficient low frequencies to the upper

levels — especially with ground-stacked subwoofers.

To solve this challenge, Hibino flew two VTX-G28 subwoofers near the ceiling on either side of the stage, as well as two slightly lower VTX-S25 subwoofers between the line arrays to provide

controlled low-end distribution across all three floors. Along with the VTX Series line array speakers and subs, Hibino deployed VTX-F12 loudspeakers as outside fills to provide even coverage on the far sides of the stage. Utilizing the same D2 Dual Driver technology as the VTX Series, the VTX-F12 blends seamlessly with the main speakers while providing wider horizontal coverage. In order to provide crystal-clear monitoring on stage, Hibino deployed VTX-M20 speakers as floor monitors.

“Even the monitors in the VTX Series sound great,” said the planner of Billboard Live TOKYO. “The stage sound meshes really well with the main mix. With the VTX-M20 monitors performers can clearly hear themselves on stage and our FOH engineers can easily dial in a great mix without having to fight the stage noise. Plus the low profile means

they look great on camera, and they don't disturb the view for the audience.”

## NEXT-proaudio Reinforces Daydream Festival

Born in Belgium in 2010, Daydream Festival is a comprehensive music festival, famous for its gorgeous scenery and atmosphere, including popular music and electric music. This Music Festival has travelled to Mexico, Spain and the Netherlands, and landed in China for the first time.

Daydream China boasted of more than 54 international top artists and 3 stages to be indulged in the fantastic dream in Shanghai International Music Park.

After deep consideration and careful selecting, the organizer chose NEXT-proaudio, for Bass Dream Stage, which was supplied by Real Music, local distributor of the Portuguese Manufacturer NEXT-proaudio.

The main hang was 10 LA212x per side, and 24 LAs418 stacked in front of the stage as low end fill. The DJ monitor was composed by 2 LAs118 plus 3 LA122 per side and another 4 X15 deployed as the ground monitor.

According Richie Wang, Real Music's CEO: "The sound pressure on the Bass Dream Stage with LA212x was really amazing"

# ParFect Light for Tank History

Nearly 400 Robe ParFect S1s LED luminaires are in action lighting the newly opened Royal Tank Museum in Amman, Jordan, illuminating 110 x battle-worn tanks from wars in the Middle East and other distant conflicts.

The lighting was specified by Amman-based AV and IT integration solutions specialist AKTCO. The project was led by Nidal Khalifeh (CEO), George Boury (project manager), and Duaa' Khraim (design engineer) from AKTCO who worked closely with Elie Battah, from Robe Middle East, to coordinate the supply of ParFects to this high-profile installation.

"This dramatic environment needed careful lighting" explained Nidal, who, together with the team at AKTCO, was extremely proud to be involved in the Museum. AKTCO responded to a tender issued by the KADDB (King Abdullah 2 Deign & Development Bureau) and proposed a lighting scheme utilising the 375 x ParFect S1s, picked for the "high quality and clarity of the light output and the range of tuneable whites".

"We really needed very high powered and precise luminaires that didn't consume too much power and would be tough and hardwearing as they are on

for very long periods each day. We knew we could rely on the proven quality of Robe, and lightsources that would not deteriorate were also a consideration" The lights are installed on gantries and trusses in the roof, and AKTCO also undertook all the installation work involved and have guaranteed this for five years.

The ParFects are controlled via a PC-based system which also handles the building control, and they can be remotely accessed via an iPad App for tweaking.

"Robe is one of the best brands we've worked with to date" confirms Nidal, "and the results of this project speak for themselves. We are also impressed with the levels of technical support from Robe and are confident they are excellent partners for us".

Ayman Takriti is AKTCO's sound engineer who, with the rest of the team, worked intensively on site with three integration engineers - Mohammad Nofal, Mohammad Bader and Ammar Mansour. Looking after the IT side ongoing are Alaa Jarrir and Aya Jarrah.

# TechData and Winmeditech Deploys Complete HARMAN Solution

In order to deliver exceptional audio, visual, lighting and control throughout the massive Seoul Dragon City hotel complex, systems integrators TechData and Winmeditech deployed a cutting-edge, end-to-end HARMAN solution made up of 428

JBL Professional speakers, 31 Crown amplifiers, eight Soundcraft mixers, 35 BSS signal processors, 147 AKG microphones and accessories and 212 AMX control systems.

TechData was hired to design audio systems for many of the critical areas in the complex, while Winmeditech was hired to provide smart environments for the AV and control systems. The HARMAN system is divided into 13 main zones that cover the two grand ballrooms, three dining rooms, four meeting rooms, a fitness center, two gyms and the building-safety center.

JBL VerTec VT4887 and VT4886 line-array loudspeakers and VT4882 subwoofers deliver audio in the ballrooms, and a variety of Control Contractor Series speakers and EON Series speakers handle the smaller spaces. Power is provided by Crown DriveCore Install series amplifiers.

Audio is mixed on Soundcraft VI-3000 72MO and GB4-32 consoles, and processed via BSS BLU-806, BLU-326 and BLU-100 signal processors. The system includes a range of AKG microphones, including D5S and D7S vocal mics. The control infrastructure includes a range of AMX products, including AMX NX-3200 NetLinx controllers, MMC-1000-NC tabletop touch panels and MKP-108L keypads.

The HARMAN systems are configured to allow for centralized monitoring in the building-safety center, requiring fewer operators and reducing costs.

# American School Adds CHAUVET Professional Maverick

"The MK2s have opened a whole new world for my students," said Gilmartin.

"I'm now able to teach them a new set of skills on our lighting desk. One of my students was recently accepted to the BFA Lighting Design program at North Carolina School of the Arts in the US. Having that additional

The American School in Japan has enhanced the infrastructure that supports its educational and arts programs by adding four CHAUVET Professional Maverick MK2 Spot fixtures from PRG to its multi-functional theatre/auditorium.

"We have been looking to make our lighting system more versatile to meet the varied demands we place on it," said Ed Gilmartin, Theater Manager/Resident Lighting Designer at the American School in Japan. "The MK2 has the performance features we were seeking. It's a first-rate mover that fits our budget."

Gilmartin has positioned two of the

Maverick MK2 Spot fixtures downstage of the proscenium and two on the first electric. "These hang points, combined with the wide field angle of the MK2s, mean that there isn't a position on stage that I can't light within a moment's notice," he said. "They have been a game changer."

programming skill on her resume helped attract the attention of this top-rated school."

Gilmartin also was impressed with the service he received from PRG. "Their team has been extremely helpful with any request that I've had," he said. "I look forward to adding more of their equipment to my inventory in the future."

# Going Mega for Israel's Independence Day Celebrations

Ronen Najar is a lighting designer used to working under some pressure, and for the 2018 Israeli Independence Day (Yom Ha'atzmaut) Opening Ceremony on Mount Herzl, Jerusalem, he needed those steely nerves as part of the creative team helping to commemorate a historically significant moment in Israel's history, ... the 70th anniversary of the 1948 Declaration of Independence. Ronen chose 55 Robe MegaPointes and 68 BMFLs - a combination of Spots and WashBeams - to illuminate the vast performance area.

The set design by Nitzan Refaely was the first visual element to be finalised. This year it comprised a large structure incorporating the tomb in the centre towards the front. Behind this a slope with a walkway was created and covered in projection screen material, brought alive by images from 15 Epson 25K laser projectors.

The rear of the structure was rigged with multiple LED screens, and there were also projections across the massive field-of-play area. A 25m x 40m box truss was flown above the centre of the performance space, suspended on sky hooks from two giant cranes.

Photo © Louise Stickland

In addition to these, two large scaffolding gantries were built at the front of the field-of-play adding more lighting and audio positions. The MegaPointes were all positioned on the stage set and used for high impact back lighting and high clarity gobo projections skimming the floor and stunning aerial effects blasting up into the night sky. The BMFL Spots and BMFL WashBeams were deployed across all the other lighting positions and were used for multiple tasks, from key lighting for the speeches and torch-bearers, the military parade sections of the show, to washing the performance area with rich colours, some secondary gobo projections and for specials and highlighting specific sections throughout the performance.

Robe's Israeli distributor Danor Theatre and Studio Systems was instrumental in ensuring that enough MegaPointes were made available in time for this premium event. Danor's Erez Hadar commented, "We are very pleased that MegaPointes were spec'd by Ronen for this show ... it is great to have as a reference and it is thanks to the whole team at Robe for helping us make this happen".

# ACME XA-1000 BSWF

In a professional performance, the beautiful lighting effects, not only produced by the lighting designer, but also need hundreds of different types of fixtures to make sure the performance will be perfect.

The main types of stage lighting used in the professional venue are mainly divided into beam wash spot and framing. In the past, if the show need different lighting effects, the users have to prepare all of these fixtures, it make the cost is higher and both of transportation & installation are inconvenient. It's a big problem for the performance renter.

With the lighting become versatile and the equipment renewal period extend, whether the performance renter can find the durable use stage lighting? Lately, ACME research and develop a newest product XA-1000 BSWF, is just to solve the problem of the user, and ambitious to make XA-1000 BSWF as a "terminator" in the professional performance market.

The original intention of ACME research and develop XA-1000 BSWF is make the stage lighting product can be used in the performance leasing company for a long time. XA-1000 BSWF is a four in one "all-around" product, with beam/wash/ spot/

framing functions, which is much more better than the traditional lamp with single function. In conclusion, as long as you own XA-1000 BSWF, you can meet the most needs of professional performance market.

XA-1000 BSWF is a high-end environmental LED product, well done in energy saving, the same use of 1500W light source, the working life of general light bulb only 750 hours, but XA-1000 BSWF can up to 20 thousand hours.

The temperature of whole machine can be effectively reduced by 50% compared with the traditional bulb, it makes the safety index greatly improved.

Super long life means the product utilization rate is increase, it can reduce the user elimination rate & training cost & maintenance fee, also the storage pressure is lower.

### **Moreover, all indicators of XA-1000 BSWF is excellence:**

- It can reach 35000 high output lumen, higher than the same type fixture in the market
- With super large light lens, 5 to 50 degrees zoom, the beam angle can be changed as you like
- Equipped with 2 pieces of diffusions, can soften the edges of light beam and achieve the washing effect
- Furthermore, can switch the high and low color rendering index if needed
- The biggest highlight of XA-1000 BSWF is the modular design, which is convenient for installation/disassembly/maintenance/Transportation.

XA-1000 BSWF is suitable for all kinds of harsh places, whether it is TV stations or large concerts, it always has outstanding play. As the leading product of ACME in 2018, XA-1000 BSWF has been promoted to the market at present, it need time to prove if it can be the "terminator" in the professional performance market. But in recent years, "one fixture with more functions" is a very popular demand, ACME also devote to develop the "all-round fixture". We are looking forward XA-1000 BSWF will has a good performance in near future, and wish it will be used in large show gradually.

# Barco UDX-4K32

The UDX-4K32 features 4K UHD resolution and 31,000 lumens light output to ensure flawless shows with accurate colors at all times.

The **Constant Light Output (CLO)** functionality also guarantees peace of mind by providing **constant brightness and color** over time. The UDX platform offers the **widest color spectrum** in the industry. Without compromising on brightness, the UDX color quality matches the renowned Xenon quality and outperforms the Rec. 709 color space.

Thanks to their laser phosphor light source, lamp-related costs and maintenance as well as image flicker, belong to the past. UDX series delivers a **long lifetime** and **high reliability** to ensure minimum downtime. The UDX's compact and rugged design allows you to **reduce shipping and labor costs**.

The modular components can be removed quickly to limit servicing time. You can also **reuse your TLD+ lenses**.

The unique FLEX<sup>2</sup> feature will allow you to **tune and lock your brightness and resolution to a specific show**. You'll now need less projectors to cover a wider range of brightness levels and resolutions.

The Barco Pulse 4K electronics offer an intuitive interface and flexible, user-friendly, embedded control software. Its **Single Step Processing (SSP)** allows for sharper images and less latency.

# BroadWeigh™ BW-HA

## Advanced Wireless Handheld Display

The BW-HA advanced wireless handheld brings an additional level of portability to the BroadWeigh system by expanding its standalone monitoring capabilities. This device allows users to perform advanced operations with load shackle readings without the need for a PC and a base station. BW-HA can be configured to one of the following three operational modes:

### Roaming Inputs

- Works straight out-of-the-box
- Shows the nearest shackles with the same radio settings
- Ideal for walking between different stages with the handheld and picking up readings from all shackles independently of other monitoring systems.

### Pre-Defined Inputs

- (Up to 24) inputs can be configured separately
- Shackles can be named and have audible warning levels set

### Summing Groups

- Shackles can be summed together giving totals for a whole structure and individual trusses

The total can be 'drilled down' to allow viewing of individual shackle values. With simple wireless configuration and calibration the licence free 2.4GHz Broadweigh Advanced Wireless Handheld Display (BW-HA) uses direct sequence spread spectrum (DSSS) radio telemetry technology. This provides high integrity, error free communications and is FCC, ETSI and IC approved.

The device features a backlit display, which makes it usable in low-light environments. Broadweigh wireless handheld display BW-HA is powered by a pair of standard alkaline AA batteries and is configured using free BW-Toolkit software which runs on a PC connected to the BroadWeigh base station.

# BSS DCP-555

## Conferencing Processor

The BSS DCP-555 is a digital conferencing processor designed specifically for meeting spaces. The DCP-555 leverages BSS's industry-leading audio processing technology to provide intelligent sound management and automated mixing in a template-based solution. This allows IT managers and integrators to easily configure hundreds or thousands of meeting rooms using a web interface without requiring Audio Architect or other software.

The BSS DCP-555 offers 4 bidirectional VoIP connections, providing support for up to four rooms of audio conferencing connectivity simultaneously without the need for separate IP phones in each room. The DCP-555 also offers a range of onboard I/O connection options, with AES67, BLU link, USB and 16x8 analog audio all built in. This provides easy compatibility with other HARMAN and third-party audio devices, with GPIO and relays available for simplified control.

- Template-Based Configuration – Quickly configure conference room systems without using Audio Architect.
- Web-Server Interface – Configuration can be done with any device connected to the same network.
- 4 Simultaneous Bi-Directional VoIP Connections – Use a single device to provide audio conferencing in up to 4 meeting spaces
- 16x8 analog audio I/O – A range of I/O connectivity options for both digital and analog audio in fixed configuration
- BLU link port – Easily interface with other HARMAN audio products.
- AES67 – networked audio distribution to any AES67-compatible device, including AMX networked AV encoders and decoders.
- 2x2 USB connectivity – Use DCP-555 as a USB microphone input to room PC or AMX Acendo Core for web conferencing.
- GPIO + Relays – Connect to other devices for push-to-talk, mute, etc.

# Claypaky Axcor Profile 600

The AXCOR PROFILE 600 stands out for its excellent combination of high performance, exceptional light quality, and versatility of use.

It fits a 500 W white LED engine, available in two versions: with high output 6500K color temperature, or - alternatively - with 5600K color temperature and a CRI of around 90. The luminous efficiency is among the highest in this power category, and - if necessary - it can be further increased by about 25% thanks to "boost mode" making AXCOR PROFILE 600 a perfect tool for tours and large events.

A wide zoom range from 5° to 45° (1:9 ratio) means the light can be used in a variety of situations, including those for which a narrow angle is best.

## Main Features

- Source: 500W White LED Engine
- CRI: at least 70, CT 6500K
- CRI: at least 90, CT 5600K
- Ø125mm front lens
- 5° - 45° linear Zoom
- CMY + Linear CTO
- One Color Wheel with 7 Colors
- One Rotating Gobo Wheel + 6 Gobos
- Rotating 4-facet prism
- Animation wheel
- Motorized framing system with 4 focal planes
- Frost filter
- Iris with multiple macros (random, pulsing...)
- Electronic linear dimmer, 16 bit and 4 curves
- Electronic strobe @25 f/sec.

The completeness of its color section, its great wealth of visual effects, its framing system implemented with technological devices that enhance its precision and versatility, the possibility of using it as a wash light, make the Axcor Profile 600 an essential benchmark for all modern entertainment uses.

# Clear-Com® FreeSpeak II

## Digital full duplex wireless intercom, receives an update increasing its abilities and performance

Clear-Com® has released a significant software update to FreeSpeak II digital wireless intercom for live performance, theater and broadcast users.

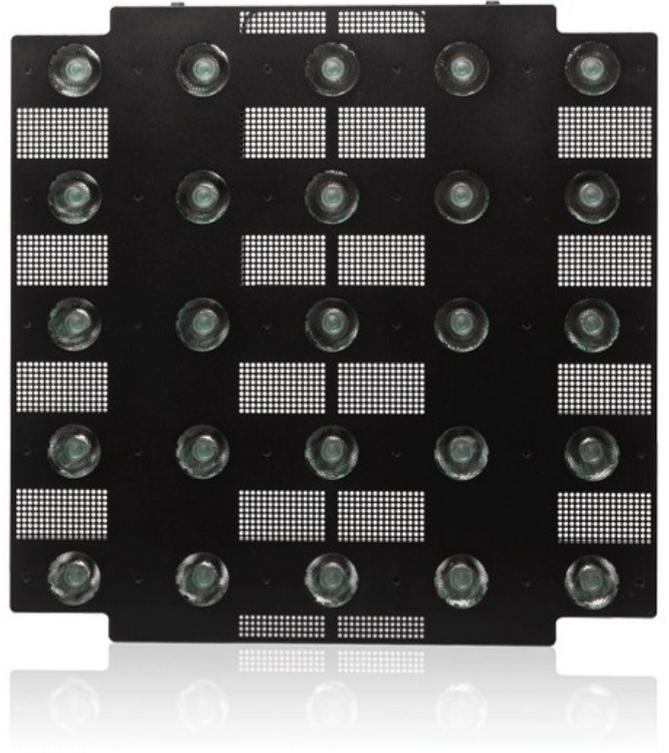

The firmware update provides new functionality, including text messaging and a cleaner User Interface, together with improved diagnostics and audio enhancements for 2.4GHz systems when used in complex radio environments.

The new firmware, available to all existing FreeSpeak II users from the Clear-Com website, updates 2.4GHz systems, the FSII-BASE-II base station and its CCM management software to provide a better user experience for both audio performance and ease of use for all users.

The new management software includes new tools for technical administrators to track beltpack roaming between cellular transceivers and quality of service over time, thus helping to tune the system for best operation.

The new software release is available from:  
[www.clearcom.com/support/freespeak-ii](http://www.clearcom.com/support/freespeak-ii)

# EK CHROMAPIX 55

The CHROMAPIX 55 is a Pixel Mappable RGBW LED unit which utilize 25 x 10W RGBW LEDs that are configured in 5 x 5 pixel matrix to create spectacular 3D beam projections in a tight beam angle for maximum throw effects.

Built for touring with durable construction with excellent heat dissipation and a rugged imported proprietary locking system for reliable assembly of large displays.

Control featured include: Master/ Slave, Auto Shows, virtual gobos with adjustable speed and rotation, Selectable dimming curves, Art-Net and DMX control.

## Main Features

- Output 9435 LUX @ 5 meters
- Color Mixing RGBW
- Pixel Matrix 5 x 5
- Strobe 0-30 Hz
- Dimming 4 dimming curve modes
- Control Art-Net, DMX
- DMX Channels 3 / 4 / 6 / 10 / 15 / 75 / 100 / 105 / HSV / HSI
- Art-Net Channels 100
- Built-in Programs Yes
- Display 128 x 64 LCD display

# FINE 1800 PERF

## 1800 WASH-PERF / 1800 WASH BEAM

**FINE ART is proud to announce the addition of three new intelligent fixtures to its stable of high-power moving head products. All three models feature a powerful 1800 watt lamp source with a high-quality optical system, and integrates the latest hardware and software technologies.**

### **FINE 1800 WASH-BEAM**

The FINE 1800 WASH-BEAM is a high-power wash beam moving head light that is capable of delivering a long projection distance due to its high-quality optical system design that amplifies the light output for more efficiency.

The main features of this lamp source are: high index, high luminous efficiency, thick beam effect, very long range, suitable for large scale events in stadiums, concerts, etc.

- **Overall Luminous Flux: >50000lm**
- **CRI: Ra>90**

## FINE 1800 PERF

The FINE 1800 PERF is a superb framing intelligent moving head light with 1800W lamp. This advanced moving head light integrates the latest technology including intelligent fan control, encoder positioning and design of master/slave

reflector, a high-magnification zoom, continuous infinite rotation, framing system, etc.

- **Overall Luminous Flux :> 46000lm**
- **Gobo Mode Evenness: >80%**
- **CRI : Ra>90**

## FINE 1800 WASH-PERF

The FINE 1800 WASH-PERF is a high-collocation framing wash intelligent moving head light. Developed with using high-quality German optics coating technology in the design of its master/slave reflector, it delivers a 10% increase for luminous efficiency, which results in a total luminous output of more than 50,000 lm. A high-power Osram 1800W lamp is fully optimize in the optical system that is the result of an advanced design in material selection and coating. The FINE 1800 WASH-PERF light also delivers very good color rendering index.

- **Overall Luminous Flux: >50000 lm**
- **CRI : Ra>90**

# NovaStar MCTRL 4K

Currently, there is only one controller out there that fully supports HDR10, and that is the MCTRL 4K from NovaStar. As screens get bigger and pixel pitch become ever smaller, standard controllers no longer fit the evolving needs of high-end system integrators and the rental market. NovaStar designed the MCTRL 4K controller to meet the high requirements for these markets, allowing you to realize your most creative designs in full 4K or even HDR. MCTRL 4K is a controller that fully supports Real 4K and HDR10. It supports resolution up to 4K x 2K @60Hz, and a maximum width up to 8K. It features 16 Neutrik Ethercon ports and 4 optical ports. Available inputs include 1x DPI 1.2, 1x HDMI2.0, and 2x Dual-Link DVI. It also allows for remote control via webpage and supports ArtNet.

MCTRL 4K also features two proprietary NovaStar-developed technologies that greatly improve image quality. The first is called 18bit+. This is an image processing technology that drastically improves grayscale in conditions with low brightness. This is achieved by optimizing the focus of the existing processing power, using it where it's needed most in these conditions. In low brightness conditions, this can effectively improve grayscale from 12bits to 18bits, an increase of 4 times. The second proprietary technology on the MCTRL 4K is an image processing technology called ClearView.

This algorithm is based on the characteristics of human vision, and monitors and adjusts the image in real time, on a pixel by pixel basis. Contrast, sharpness, picture size, and many more conditions are all factored in to this algorithm, dramatically improving overall clarity. The MCTRL 4K, when paired with NovaStar's Armor Series receiving cards, can provide an amazing 4K ultra-high-definition image. When used with the A8s or A10s receiving cards, it can also provide HDR functionality, the most vivid and rich viewing experience available.

Currently, the most widely embraced application for the MCTRL 4K controller is NovaStar's Phobos Series. This combines the MCTRL 4K controller with an Armor Series receiving card, which is then easily managed with the user-friendly SmartLCT software. These three products together make up Phobos, and it is the best solution on the market for high-end or rental applications. Not only do we feel it is the best, the MCTRL 4K is currently the ONLY product out there that fully supports HDR10. Whether you are ready to make use of its HDR functionality or not, the MCTRL 4K remains the most powerful and stable 4K UHD controller available for high-end and rental applications.

Additionally, you have the comfort of knowing that it already supports HDR. This ensures that when you feel providing an HDR-quality experience becomes necessary, you don't need to purchase another controller, making the MCTRL 4K delightfully future-proof.

# RGBlink MSP 314-2 Fibre Optic Extender

## Features:

**Components:** Laser Diodes in Transmitter 2×1310/1550nm WDM OSA  
Photo Diodes in Receiver 2×1310/1550nm WDM PIN-TIA OSA

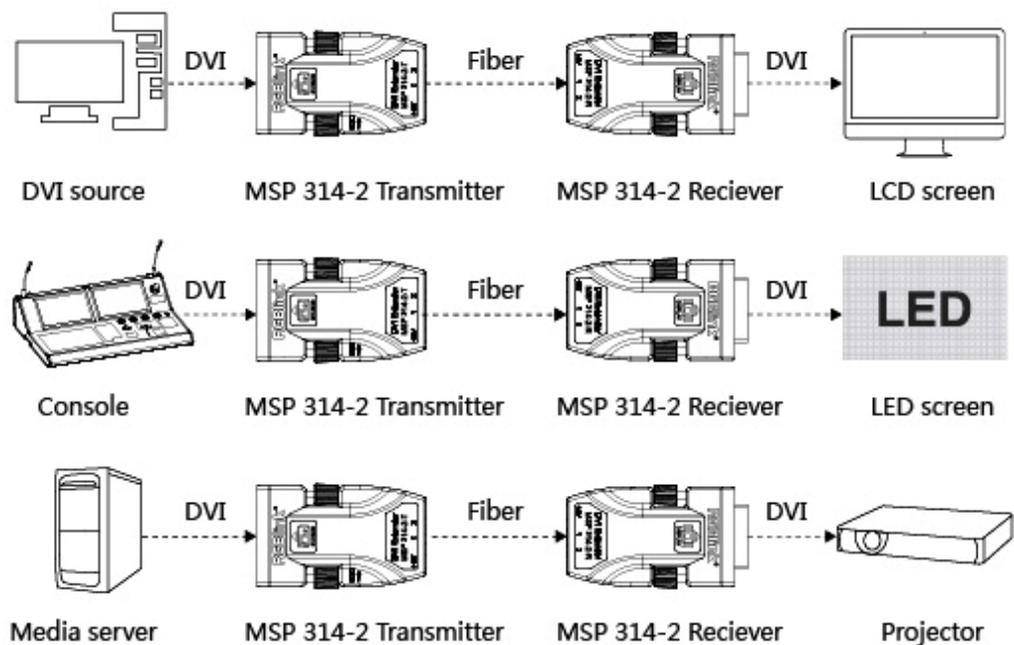

**Electricity:** Input and Output Signal TMDs Level (complying with DVI1.0)  
Data Transfer Rate (Max) Max. 1.65Gbps Maximum  
Output Jitter in Receiver Max. 309 ps Time Deviation in Internal Channel Max. 6ns

**Optical:** The Dynamic Range of Optical Power Min 10.5dB

**Structure:** Dimension (mm) 42W×16H×69L

**Connector:** Fiber Connector 2× LC DVI Connector 18+1 pin | DVI-D  
Recommended Fiber 50/125 um, 62.5/125um / Multi Mode Fiber or Single Mode Fiber

**Extend Distance:** Multi Mode Fiber 500m / Single Mode Fiber 2000m

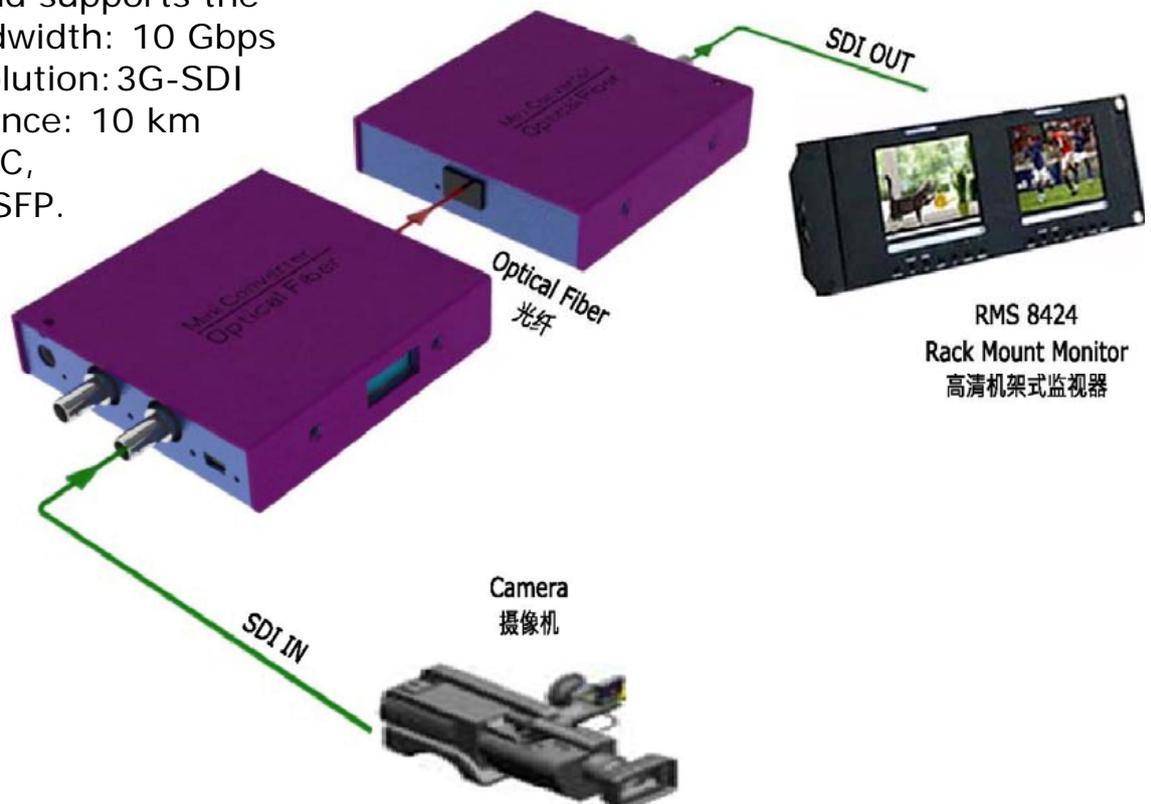

# RGBlink MSP 217 SDI Extender

The MSP 217 SDI Extender consists of the SDI transmitter (*MSP 217 TX SDI to Fiber*) and SDI receiver (*MSP 217 RX Fiber to SDI*).

MSP 217 TX SDI to Fiber is the transmitter, and MSP 217 RX Fiber to SDI is the receiver, the two devices are used together, it can be realized The long distance transmission of SDI signal by MSP 217 SDI to Fiber With fiber optical cable to MSP 217 Fiber to SDI. This is especially suitable for the high definition video signal transmission in the train platform and the military practice.

## Key Features

- MSP 217 is compatible with SMPTE 424M, SMPTE 292M, SMPTE 259M standard, and supports the highest video bandwidth: 10 Gbps
- Support max. resolution: 3G-SDI
- Transmission distance: 10 km
- Video interface BNC, Optical interface: SFP.
- External optical fiber type: Single mode twin-core, LC connector.

# Spotlight HYPERION

## Profile LED 300W 6 Colours

The HYPERION Profile LED 300W 6 Colours from Spotlight is a very flexible fixture with interchangeable optics, designed to be used in professional theatres, TV studios where higher performances are required.

Thanks to the very compact LED engine, it reaches the widest mix of shades with

extreme evenness/  
homogeneity, in

addition to a full  
selection of

white colour  
temperatures  
from 2700 to  
8000K with a  
CRI from 94  
to 97.

### Main Features

- 300W, 6 colours LED engine; red, green, blue, amber, cyan and lime
- Expected life higher than 50,000 hours
- CRI: 94 to 97
- Continuous light spectrum
- 2 high definition interchangeable lenses with zoom of 15°-30° and of 25°-50°
- Lenses and shutters rotating block, for a better beam shaping
- Soft and even colour mixing on every beam spread
- Extra soft dimming for theatre use
- "Flicker free" frequency adjustment for TV and film applications
- Colour booster, to improve the power of a single colour when not all the channels are at full at the same time
- RDM compliant

# Yamaha HY144-D-SRC

Yamaha has a new professional audio interface cards for the RIVAGE PM digital mixing system, the HY144-D-SRC feature onboard sample rate conversion (SRC), allowing devices running at different sampling rates to be connected to RIVAGE PM systems.

The HY144-D-SRC is a network I/O card that supports up to 144 inputs and 144 outputs via Dante audio networking. While essentially the same as the current HY144-D card for RIVAGE PM systems, the HY144-D-SRC adds onboard sample rate conversion, which adds convenience to audio systems where devices running at different sample rates need to be interconnected. Synchronous and asynchronous SRC modes allow interoperability between a wide range of devices, without noise and dropouts.

The HY144-D-SRC firmware can be programmed to operate in any of five modes (including one in which SRC is disabled):

- 144io (SRC off, 144 in/144 out)
- 144io SyncSRC (SRC on, synchronous, 144 in/144 out)
- 72io AsyncSRC (SRC on, asynchronous, 72 in/72 out)
- 144in AsyncSRC (SRC on, asynchronous, 144 in/0 out)
- 144o AsyncSRC (SRC on, asynchronous, 0 in/144 out).

# Yamaha HY128-MD

Yamaha has a new professional audio interface cards for the RIVAGE PM digital mixing system, the HY128-MD feature onboard sample rate conversion (SRC), allowing devices running at different sampling rates to be connected to RIVAGE PM systems.

The HY128-MD is a 128-in/128-out audio interface card that supports the MADI audio protocol.

It can be used, for example, to convert the output of a RIVAGE PM10 system used for live sound reinforcement to

MADI, for transmission to an OB truck for broadcast, or to connect to a MADI-based mixing console.

In addition to MADI conversion, the HY128-MD provides asynchronous sample rate conversion, allowing devices using different word clocks to be connected without noise and dropouts.

Coaxial and optical MADI transmission lines are provided for redundancy, helping to prevent downtime in the event that one or the other fails.
